

Device Settings

Device settings let you change many things on your device, such as the brightness, text size, speaker volume, and vibrating alerts

Device Settings

1

Open Settings

- Find the Settings app. You can look for it on your device's home screen or in the app launcher. The app launcher shows you all the apps you have on your device.
- The Settings icon looks like a gear. It can look a bit different depending on your version of Android.
- Tap on the **Settings** app to open it

2

View the settings menu

- The settings menu lets you change things on your device, like:
 - Screen brightness
 - Text size
 - Volume
 - Vibrating alerts

3

Adjust the brightness and text size

- Tap on **Display** and then tap **Brightness level**. Slide the slider right to make your screen brighter or to the left to make your screen darker.
- The brighter your screen is, the better you can see it. But a brighter screen also drains your battery faster.
- You can also change the text size. If you find it hard to read the screen, larger text can help.
- Go back to the **Display** menu. Tap the option called **Font Size**. Slide the slider right to make text larger or left to make text smaller.

4

Change the volume

- Go back to the settings menu. Then, tap **Sound**.
- Here you can change your ringtone volume and make it so different apps have different ringtones. Move the sliders to adjust the volume for each sound.
- Tap the bar next to **Vibrate** to make your device vibrate when you receive a phone call or text
